

BC-WiFi Setup Guide for Android Devices

NOTE: There are many different versions of the Android operating system. Because of this, the menus and layout on your device may appear a bit differently from what you see below. However, the settings you must enter should remain the same, regardless of the device.

1) Navigate to the **Settings** menu on your device, and then select **Wi-Fi settings**.

2) Select **BC-WiFi** from the available Wi-Fi networks. If you are unable to see **BC-WiFi**, then there is no wireless signal in your current location.

3) You must use the following credentials:

EAP Method: **TTLS**

Phase 2 authentication: **PAP**

Identity:

For Students, **Your 8-digit CUNY-assigned EMPL-ID**

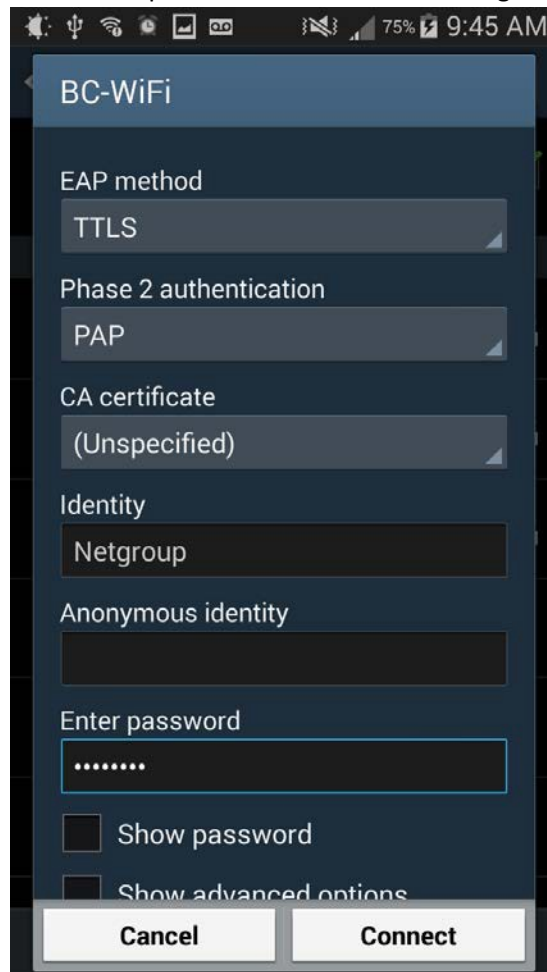

For Staff/Faculty, your BC E-Mail username (the part that appears **before** @brooklyn.cuny.edu)

Password:

For Students, **FLMM/DD/YY**, where FL – Your CUNYfirst official First and Last initials (upper case),
MM/DD/YY – Your birthdate with “/” separators

For Staff/Faculty, Your BC E-Mail password

All other options should remain unchanged.

Click on **Connect** to finish. After a few moments, you should be connected to BC-WiFi.
