

Internships with Light Iron Digital

1. As an **IT Intern**, you'll help us install and test new hardware, software, and build out our network infrastructure. You'll learn how to fix things when they break and we'll expose you to many different areas of digital cinema and post-production. Finally, we'll teach you about scripting and automating tasks and guide you as you work on a development project or two.

Preferred qualifications:

- A background in Computer Science, IT, or post-production.
- Strong problem-solving skills
- Self-motivated and independent
- Familiarity with Python or prior programming experience
- Experience using Mac OSX and Windows
- Positive attitude

2. As a **Producing Intern**, you'll work closely with our producers assisting in the following:

- Help build and customize workflow documentation
- Assist with client-supervised sessions
- Assist with project management
- Occasional runs to local vendors & deliveries
- Vault inventory assistance: shipping and receiving

Both of these positions are three-month unpaid internships. We're growing quickly and there's a ton of work to do. This internship offers a great opportunity to learn about and tinker with the technical and management aspects of post-production.
